About Evotec AG

Evotec is a leader in the discovery and development of novel small molecule drugs. Both through its own discovery programs and through research collaborations, it is generating the highest quality research results to its partners in the pharmaceutical and biotechnology industries. In proprietary projects, Evotec specializes in finding new treatments for diseases of the Central Nervous System. Evotec has four programs in clinical development: EVT 201, a partial positive allosteric modulator (pPAM) of the GABA_A receptor complex for the treatment of insomnia, EVT 302, a MAO-B inhibitor in development for smoking cessation, EVT 101, a subtype selective NMDA receptor antagonist for the treatment of Alzheimer's disease and/or pain, and a P2X₇ antagonist for the treatment of inflammatory diseases. In addition, Evotec has a number of proprietary projects in preclinical development as well as a worldwide license agreement with Pfizer to research, develop and commercialize small molecule vanilloid receptor (VR1) antagonists for the treatment of pain.
