

CEO Environmental Commitment Statement

At Evotec, we pioneer drug discovery and development through scientific excellence, advanced technologies and strong partnerships. We believe scientific leadership and responsible stewardship go hand in hand. The same technologies and innovations that help accelerate the journey from concept to cure can also support more efficient use of resources, lower environmental impacts and help build a more resilient business. As we pursue this ambition, we remain committed to operating responsibly and managing our environmental impacts with the same commitment to excellence that we apply to our science.

Sustainability is embedded in the way we innovate, operate and lead. We believe that better science, smarter technologies and new ways of working can help reduce environmental impacts while accelerating the development of innovative medicines. Guided by this approach, we are committed to protecting the environment across our global operations and value chain. This includes addressing climate change, promoting the responsible use of natural resources, preventing pollution, supporting water stewardship and considering biodiversity impacts associated with our activities. We are equally committed to complying with applicable environmental requirements and continuously improving our environmental performance.

Climate change remains a key consideration for our business. We believe the life sciences sector has a responsibility to help drive the transition to a low-carbon economy. At Evotec, this is reflected in our validated science-based targets and our long-term ambition to achieve net-zero greenhouse gas emissions across our value chain by 2045.

Delivering on these commitments requires accountability and collaboration across our business and value chain. Progress depends on empowered teams, strong leadership and clear ownership at every level of the organisation. Together with our employees, partners and suppliers, we will continue to strengthen environmental performance while helping bring innovative medicines to patients faster.
