Evotec receives milestone as part of its multi-target alliance with Bayer HealthCare

Hamburg, Germany – 30 September 2014: Evotec AG (Frankfurt Stock Exchange: EVT, TecDAX, ISIN: DE0005664809) announced today that its multi-target collaboration with Bayer HealthCare ("Bayer") has reached an important milestone for the transition of a molecule into pre-clinical development for the treatment of endometriosis.

This milestone was achieved under the agreement between Evotec and Bayer signed in October 2012. The goal of this collaboration is to develop three clinical candidates within the five year alliance. Both parties contribute innovative drug targets and high-quality technology infrastructures and share the responsibility for early research and pre-clinical characterisation of potential clinical candidates in the disease area of endometriosis.

Dr Mario Polywka, Chief Operating Officer of Evotec, commented: "We are very pleased to achieve this validation of our joint work with the Bayer team. Both teams of scientists have developed a tremendous relationship and collaborative way of working and we look forward to continue this productive work and focus our efforts on bringing forward new drug candidates to tackle this significant disease."

Further financial details were not disclosed.

ABOUT ENDOMETRIOSIS

Endometriosis affects an estimated 176 million women worldwide or 10% of women of reproductive age. It is caused by the abnormal growth of tissue similar to that which lines the uterus (endometrial tissue) in locations outside of the uterine cavity, where it causes ectopic lesion growth and debilitating pain. Endometrial growth is commonly found on the ovaries and pelvic peritoneum, potentially involving other organs of the pelvic cavity as e.g. bladder, bowel, and the rectovaginal space. There is no known cure for endometriosis and most available drug treatments have certain limitations. Endometriosis is a highly complex and heterogeneous disease and there is still a high unmet medical need for innovative therapies which address the individual needs of affected women. The disease can greatly impact a woman's social, professional and personal life, and women with endometriosis often experience a higher incidence of depression and emotional distress due to the uncertainty of diagnosis, unpredictability of symptoms and living a normal life. ABOUT EVOTEC AG

Evotec is a drug discovery alliance and development partnership company focused on rapidly progressing innovative product approaches with leading

pharmaceutical and biotechnology companies. We operate worldwide providing the highest quality stand-alone and integrated drug discovery solutions, covering all activities from target-to-clinic. The Company has established a unique position by assembling top-class scientific experts and integrating state-of-the-art technologies as well as substantial experience and expertise in key therapeutic areas including neuroscience, pain, metabolic diseases as well as oncology, inflammation and infectious diseases. Evotec has long-term discovery alliances with partners including Bayer, Boehringer Ingelheim, CHDI, Genentech, Janssen Pharmaceuticals, MedImmune/AstraZeneca, Roche and UCB. In addition, the Company has existing development partnerships and product candidates both in clinical and pre-clinical development. These include partnerships with Boehringer Ingelheim and MedImmune in the field of diabetes, with Janssen Pharmaceuticals in the field of depression and with Roche in the field of Alzheimer's disease.
